CoreWeave, Inc. (Nasdaq: CRWV) — Credit Review

As of August 13, 2026 (Q2'26 10-Q, pro forma for subsequent events) · Peter Deng · $ in millions unless noted

Credit view. CoreWeave is a highly leveraged, capital-markets-dependent credit. It needs about $44.8bn of new financing from July 2026 to December 2027, on top of $38.0bn of pro forma debt, because planned capex ($57.9bn) is nearly four times operating cash flow. Leverage falls as the GPU fleet ramps, but coverage does not: depreciation absorbs ~90% of Adj. EBITDA and operating income covers only ~0.2x of interest. In our combined downside, FY27 Adj. EBITDA no longer covers interest (0.96x). Near-term liquidity is adequate; the key risk is continued market access.

$38.0bn	$44.8bn	8.6x / 6.3x	0.24x	0.96x
Pro forma debt (8/13); 90% recourse, 56% secured	New financing needed, 2H26–FY27 (base)	Debt / Adj. EBITDA, LTM / Q2 run-rate	Adj. operating income / interest, LTM	FY27 Adj. EBITDA / interest, downside B

CAPITAL STRUCTURE (PRO FORMA 8/13/2026)

Instrument	$mm	%	Security	Rate (eff.)	Final maturity
Delayed draw term loans (DDTL 1.0–5.5)	14,843	39%	Secured	SOFR + spread; 7–15%	2028–32, amort.
Senior notes (USD, EUR)	10,029	26%	Unsecured	Fixed 8.5–9.75%	2030–32, bullet
Convertible notes	6,588	17%	Unsecured	~2%	2031–32, bullet
OEM / software vendor financing	5,102	13%	Secured	9–11%	2026–30
Revolving credit facility	1,200	3%	Secured	Floating; 7%	Nov 2029
Magnetar loan	189	1%	n.d.	12% accretion	Jan 2029
Total	**37,951**	**100%**		**8.4% wtd.**	

Non-recourse debt is $3.7bn (DDTL 4.0, part of OEM financing). Rate mix: 44% fixed, 35% floating, 7% mixed. Annual interest on the 8/13 debt load is ~$3.2bn. The new DDTL 5.5 is rated Ba2 (Moody's) / BB+ (Fitch) at the facility level; the unsecured notes rank behind $21.1bn of secured debt.

DEBT SERVICE CAPACITY

	LTM 6/30/26	Run-rate Q2×4
Revenue	7,590	10,300
Adj. EBITDA	4,400	6,040
Total debt / Adj. EBITDA	8.6x	6.3x
Net debt / Adj. EBITDA	6.8x	5.0x
Recourse debt / Adj. EBITDA	7.8x	5.7x
Adj. EBITDA / interest	2.35x	2.36x
Adj. operating income / interest	**0.24x**	**0.20x**

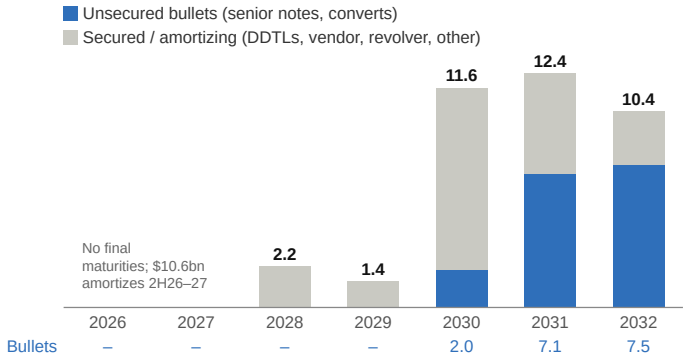
On pro forma interest ($3.2bn a year), run-rate coverage is 1.89x (EBITDA) and 0.16x (operating income). Liquidity of $17.8bn covers next-12-month debt service ($7.5bn principal + $3.2bn interest) 1.66x, but $9.1bn is DDTL capacity usable only for capex: cash plus revolver cover just **0.81x**.

FUNDING NEED, JULY 2026 – DECEMBER 2027

$mm	2H26	FY27	Total
Capex (company basis)	20,861	37,000	57,861
Scheduled debt maturities	4,413	6,184	10,597
Interest on existing debt and facility draws	1,712	3,391	5,102
Minimum cash balance	2,000	–	2,000
Total uses	**28,986**	**46,575**	**75,560**
Pro forma cash (excl. restricted)	7,939	–	7,939
Undrawn committed facilities	9,829	–	9,829
Operating cash flow before interest	4,670	10,890	15,560
Total sources	**22,438**	**10,890**	**33,328**
Gap before interest on new debt	6,548	35,684	42,232
Interest on new debt (9.5%)	159	2,448	2,608
New financing required	**6,707**	**38,133**	**44,840**

The shortfall starts in 2H26: existing cash and committed facilities cover only 61% of 2H26 uses. Capex follows the FY26 guidance midpoint ($37bn) and is held flat in FY27. Operating cash flow is Adj. EBITDA at the 1H26 margin (57.3%) on guided 2H26 revenue and FY27 revenue held at the exiting-2026 ARR midpoint ($19bn), with no credit for customer prepayments.

MATURITY PROFILE (BY FINAL MATURITY, $BN)



Debt Database, pro forma 8/13/2026. Amortizing DDTLs and vendor financing are shown at final maturity; balances will be lower by then.

Nothing reaches final maturity before 2028, but **$34.4bn does in 2030–32**, including $16.6bn of unsecured notes and converts that must be refinanced or converted. Scheduled principal including amortization is $4.4bn in 2H26 and $6.2bn in 2027, already in the funding need.

DOWNSIDE SCENARIOS (FY27E)

	Base	A: GPU pricing	B: delays, pricing, rates
Adj. EBITDA margin	57.3%	45%	45%
Revenue vs plan	–	–	−10% / −20%*
SOFR shock / new debt rate	0bp / 9.5%	0bp / 11.0%	+100bp / 12.0%
New financing, 2H26–FY27	44,840	48,907	51,693
FY27 Adj. EBITDA	10,890	8,550	6,840
FY27 total interest	5,839	6,508	7,118
End-2027 debt	82,023	86,090	88,876
Debt / FY27 Adj. EBITDA	**7.5x**	**10.1x**	**13.0x**
Adj. EBITDA / interest	**1.87x**	**1.31x**	**0.96x**

* Revenue vs plan: −10% in 2H26, −20% in FY27.

The stress hits debt service capacity far more than funding size (+$6.9bn in case B), because capex is held at plan in every case; a capex cut is management's main lever. The base case is itself conservative: FY27 revenue gets no credit for capacity added by FY27 capex (at ~$25bn of FY27 revenue, leverage would be ~5.5x).

WHAT TO MONITOR

- DDTL 5.0 draw period ends 9/30/2026 with $2.0bn undrawn; unused commitments lapse.
- DDTL 5.5 debt service coverage covenant of at least 1.35x, tested from January 2027 at the latest.
- Quarterly capex vs the Q3'26 guide ($11.5–13.5bn) and conversion of $11.9bn of construction in progress.
- New-issue pricing vs the 9.5% assumed; Adj. EBITDA margin vs 57%; interest vs the Q3'26 guide ($860–940m).

RISKS AND MITIGANTS

Risk	Why it matters	Mitigant
Capital-markets dependence	$44.8bn of new financing through 2027, $6.7bn in 2H26 (~$2.5bn a month)	Raised ~$18bn in Q2'26 alone across debt, converts and equity
GPU pricing / obsolescence	Margin to 45% takes FY27 leverage from 7.5x to 10.1x	$104.2bn contracted revenue backlog
Delivery delays	Revenue slips while committed capex continues	4.2 GW contracted power vs 1.5 GW active at Q2
Floating rates	35% of debt floats; +100bp ≈ $132m a year	DDTL 3.0 ≥75% swapped; notes fixed
2030–32 refinancing wall	$16.6bn of unsecured bullets in three years	$6.6bn are converts that may settle in equity; DDTLs amortize
Subordination	Unsecured notes rank behind $21.1bn of secured, largely subsidiary-level debt	Contracts underwritten to repay asset-level debt within initial term (CFO)

KEY ASSUMPTIONS

- Information public on or before 8/13/2026 only; September 2026 converts and Q3 results excluded.
- Debt at principal; interest at 10-Q effective rates (DDTL 5.5 assumed 10%).
- Capex on the company's definition (PP&E additions incl. finance leases, less change in CIP), not cash capex.
- Undrawn facilities drawn evenly in 2H26; new debt at 9.5%, drawn evenly, not repaid before 2028.
- $2.0bn minimum cash; restricted cash ($1.4bn) excluded. Full list of 24 assumptions with rationale and sensitivities in the model's Assumptions Log.
